

SUMMARY

Overview

Farmora is an end-to-end Business Intelligence solution for smart farm management. The system transforms operational data into actionable insights through an integrated BI architecture, enabling intelligent decision-making across Crop, Livestock, and Poultry sectors.

END-TO-END BI PROJECT CYCLE

Power Apps

-  Developed the customer-facing "Farmora Market" application using Microsoft Power Apps.
-  Allowing customers to place production requests digitally. Orders are automatically stored in Google Sheets.
-  **Power Automate** sends confirmation emails after the order is submitted successfully.

Process Automation

-  Automated low-stock alerts using **Power Automate**.
-  Built an automated workflow with **n8n** to generate reports and distribute them via email.

AI Agent Architecture

-  **Dashboard Agent**
Receives user requests.
-  **Orchestrator Agent**
Routes each request to the appropriate agent.
-  **Narrator Agent**
Generates natural-language responses.
-  **Triage Agent**
Classifies and prioritizes incoming requests.

All agents read from and write to the **SQLite** database, while customer interactions are synchronized with **Google Sheets**.
